Are you looking for attractive career prospects?
PRÜFTECHNIK AG is based in Ismaning, near Munich. With around 500 employees and branches in more than 18 countries, the company is the global leader in intelligent high-tech testing and measurement systems and services for industrial maintenance and quality assurance.

Our business is in products, processes and services for condition monitoring and for optimizing availability of machines and systems. In other words, we contribute to ensuring the trouble-free running of machines and to their consistently high quality production. This also includes systems for automatic process control and quality assurance that are integrated into production facilities and identify faulty parts during operation.

We are proud of what we have achieved in the 40 years since the company was founded – and of course, we are most proud of our employees!

The current range of products from PRÜFTECHNIK AG is based solely on their strength in innovation and on their strong commitment. In order to continue developing the highest quality products, we support all our staff in their continuing vocational and professional development through language courses, trainee programs, training and on-the-job qualifications.

The chances and opportunities provided by PRÜFTECHNIK are best known to those who work for us, of course. A few of them will now briefly introduce themselves.

Find out about PRÜFTECHNIK – our employees take the floor!
Current position at PRÜFTECHNIK
Trainee

How did you arrive at PRÜFTECHNIK?
One of the professors at my university recommended that I write my bachelor thesis at PRÜFTECHNIK.

What has been your career path to date?
I studied Engineering Business Management, with a focus on “Technical Sales and Purchasing”. My first contact with PRÜFTECHNIK was my student placement in the marketing department. I also wrote my bachelor thesis while working there. When I completed my degree, I immediately started working as a trainee.

Are you planning to continue your career at PRÜFTECHNIK?
Following my two-year trainee program, I would very much like to work in technical sales. There’s the opportunity for lots of interaction with people, but at the same time you don’t lose sight of the technology.

Why do you like working at PRÜFTECHNIK?
In my current role as a trainee, I really like the fact that my working day is very varied. The trainee program is specifically tailored to each individual, which means that I am learning about both technical and business activities. It is very important to learn about different areas of the business and to understand the relationships between them. What I appreciate about PRÜFTECHNIK itself is that, in contrast to the big firms, you aren’t just a small cog in a big wheel – instead, after a relatively short time, you are given responsibility for a project, and the decision-making channels are short and uncomplicated.

Which project or challenge have you enjoyed most so far?
I have just completed a reference project for a new piece of multi-site software. This involved drawing up guidelines and supporting international subsidiaries during the introduction of the new software tool. What was great about it was that, as project manager, I could work and act autonomously.

Do you see yourself continuing to work at PRÜFTECHNIK after the trainee program?
You never know what will happen, but so far I feel really at home in the company. My colleagues are really nice and the benefits are a good fit. I can also easily see myself working abroad at some point, to get to know other cultures and languages. With branches throughout the world, PRÜFTECHNIK offers great opportunities in this respect.

"When you gain experience, you discover: the path is the goal."

Lucas Falkenberg
Bachelor of Engineering
How did you arrive at PRÜFTECHNIK?
In the conventional manner, through a job ad.

What has been your career path to date?
After qualifying as an industrial business management assistant, I obtained further qualifications in industrial business administration. My first role at PRÜFTECHNIK was in order processing, after which I transferred to marketing with a focus on trade fair organization and project coordination. During that period I completed a course in media business management alongside my job, and now I manage the marketing department.

Have you been given the opportunity to gain experience in other countries?
At PRÜFTECHNIK, regular exchange with our branches around the world is very important. I will be visiting several subsidiaries next year, and I’m really looking forward to it.

Why do you like working at PRÜFTECHNIK?
PRÜFTECHNIK is a very nurturing company, which looks after its employees and supports them in their career development. Anyone who wants to can take on other roles and pursue their professional development at any time. I was given this opportunity and I really appreciated it.

Which project or challenge have you enjoyed most so far?
As head of the marketing department, I work on a wide range of projects every day, from organizing trade fairs to online marketing and transnational collaboration with our subsidiaries. In the recent past, the most significant achievement for me has been the successful creation and reorientation of the Marketing department. I’m very proud of that.

Can you imagine “growing old” at PRÜFTECHNIK and if yes, why?
Yes, I really like going to work, as I very much enjoy both my job and the activities it involves.
How did you arrive at PRÜFTECHNIK?
On the recommendation of a former fellow student, who was already working at PRÜFTECHNIK at that point.

What has been your career path to date?
Immediately after finishing my degree in mechanical engineering at Munich University of Applied Sciences, I started working at PRÜFTECHNIK as a trainee in the service and diagnostic center. Then, via a range of positions within the company, I rose to become head of the international sales team.

Have you been given the opportunity to gain experience in other countries?
The great thing about working in sales is that I don’t just sit at a desk all the time. I get to travel often, sometimes for up to 2 weeks at a time. I’ve already seen a lot of the world with PRÜFTECHNIK. For example, I’ve been to Japan, Saudi Arabia, Singapore, Azerbaijan and Chile.

Why do you like working at PRÜFTECHNIK?
A medium-sized company like PRÜFTECHNIK has the unassailable advantage that the scope of the role is very broad, and you aren’t just responsible for one small aspect. Our customers come from a wide range of sectors and continents, so I’m always learning about new technologies and cultures, too. As a result, you don’t get bored, and there are always new challenges out there.

Which project or challenge have you enjoyed most so far?
I really enjoyed setting up one of our foreign branches. That was my first real challenge at PRÜFTECHNIK. After a hectic starting period, I got to experience first-hand how we were able to win over more and more customers with our products. Today, that branch has one of the highest turnovers worldwide.

Can you imagine “growing old” at PRÜFTECHNIK and if yes, why?
At the moment, absolutely. I like going to work in the morning and have tasks that I really enjoy doing.
"If you want to get things done, then pitch in!"

How did you arrive at PRÜFTECHNIK?
On the recommendation of a former teacher of mine.

What has been your career path to date?
I began my career at PRÜFTECHNIK with an apprenticeship in industrial electronics. On completion of this, I was taken on right away. After my military service, I took up a position in the development and technology department. I completed my engineering apprenticeship at night school and now – after several years in managerial roles – I’m head of the electronics and coils production department.

Why do you like working at PRÜFTECHNIK?
There’s a new challenge every day – it might be technical, it might be human. I enjoy this responsibility and it really motivates me to make an active contribution to the company. Also, at PRÜFTECHNIK, I have the freedom to make my own decisions – something I really value.

Which project or challenge have you enjoyed most so far?
Recently, our production team had the opportunity to move to a new location. The move, and restructuring of the department, was very demanding. But in general, it’s always exciting to be a part of the creation process when development projects or drawings are turned into “concrete” products that can then go into mass production.

Can you imagine “growing old” at PRÜFTECHNIK and if yes, why?
Yes. I identify closely with the company. Its products are truly interesting, employees can really play their part and are also encouraged to develop. On top of that we have a strong team in production, and work in a friendly atmosphere where mutual trust and respect are clearly evident.
Do we fit your plans for the future? Welcome to the team!

We have entry-level opportunities for:

- Engaged employees
- Young professionals, trainees
- Student placements and apprentices
